

FIG. 1 is a perspective view of a cable assembly 100 in an exploded view. The cable assembly 100 includes a first connector 10, a first cable 12, a first plug 22, a second cable 21, a second plug 21, a second connector 20, a third cable 4, and a third connector 8. The first connector 10 is connected to the first cable 12, which is connected to the first plug 22. The second cable 21 is connected to the second plug 21, which is connected to the second connector 20. The third cable 4 is connected to the third connector 8. The second connector 20 is connected to the first connector 10 via the second cable 21 and the second plug 21. The third connector 8 is connected to the second connector 20 via the third cable 4 and the second plug 21. The second connector 20 is connected to the first connector 10 via the second cable 21 and the second plug 21. The third connector 8 is connected to the second connector 20 via the third cable 4 and the second plug 21.

FIG. 1

FIG. 2

FIG. 3 is a perspective view of the device 100 in a closed position, showing the housing 70, the lid 71, the gasket 72, the handle 73, and the latch 74.

FIG. 3

FIG. 4

FIG. 5 is a perspective view of the device 100 in a closed position, showing the housing 10 and the display 20. The housing 10 includes a front face 11, a top face 12, and a bottom face 13. The display 20 is mounted on the front face 11 and includes a display area 21 and a control area 22. The control area 22 includes a plurality of buttons 23 and a touch-sensitive area 24. The device 100 is shown in a closed position, with the display 20 folded against the front face 11 of the housing 10.

92

FIG. 5

FIG. 6 is a perspective view of the device 10 in an open position, showing the upper housing 12 and the lower housing 14. The upper housing 12 is hinged to the lower housing 14 at the front edge. The upper housing 12 is shown in a partially open position, revealing the interior of the device 10. The lower housing 14 contains a plurality of components, including a display screen 16, a keyboard 18, and a trackball 20. The display screen 16 is located at the front of the lower housing 14, and the keyboard 18 and trackball 20 are located on the right side of the lower housing 14. The trackball 20 is a small, spherical device that is used to control the cursor on the display screen 16. The device 10 is shown in a perspective view, which is a three-dimensional representation of the device 10. The perspective view allows the viewer to see the device 10 from a three-quarter angle, providing a more realistic view of the device 10 than a top-down or side-view. The perspective view also allows the viewer to see the relationship between the different components of the device 10, such as the display screen 16, the keyboard 18, and the trackball 20. The perspective view is a common way to show a device in a patent drawing, as it provides a clear and concise way to illustrate the device's structure and components.
